ERCO - Bendigo Art Gallery

One of Australia's most innovative and popular regional art museum, Bendigo Art Gallery launched its \$8.5 million new expansion. The large contemporary wing of galleries bordering Rosalind Park was designed by Karl Fender of **Fender Katsalidis Architects (FKA)**, who since 1996 has been responsible for the gallery's internal refurbishment and for expanding its architectural footprint. Working alongside FKA was **Umow Lai** as the appointed consultants to provide the building services design.

The redevelopment has delivered an overall addition of 600sqm of gallery space as well as specialist sub-terrain storage solutions for the Gallery's extensive and diverse collection of almost 5000 objects. An expanded and refurbished Gallery Cafe was also launched alongside the opening of this astonishing new wing.

ERCO flanged DALI track in white colour is integrated within the high ceiling exhibition galleries. The track clean installation blends unnoticed into the white ceiling structure. ERCO Optec 24W LED spotlights featuring spot and flood lenses illuminate all artworks and collections. The Optec range meets all galleries and museums requirements because its flawless performance, optimal glare control and broad range of accessories to achieve any light distribution and effect.

Other areas in the new building are lit with ERCO Quintessence LED directionals. The 6W recessed luminaires are flush mounted, featuring ERCO spherolit spot lenses and a good cut-off angle for maximum glare control. All luminaires are DALI controlled and in 3000K colour temperature.

In the last decade, Bendigo Art Gallery has cemented its reputation for presenting innovative international exhibitions alongside a dynamic and varied suite of public programs and events. Bendigo Art Gallery attracts a diverse audience from metropolitan Melbourne, and from across Victoria and Australia.

WE-EF FLC100 RAIL66

Theatrical effect in hospitality lighting

The life-span of retail and hospitality businesses can be short-lived if market trends are ignored. Having an adjustable directional lighting system with the capability of being reconfigured 'on-the-spot' can provide an immediate competitive advantage – without costly architectural or design renovations – and instantly transform the consumer experience of a shop or cafe.

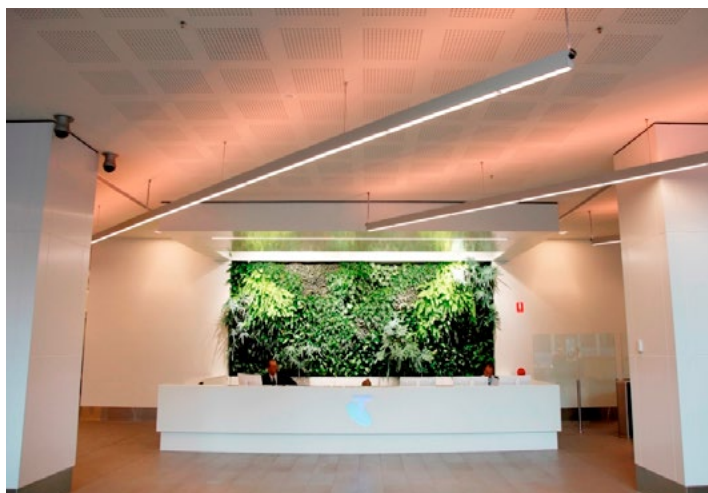

The WE-EF RAIL66 mounting system means fewer structural attachment points while allowing total freedom for directional display lighting with projectors or floodlights – something that was previously considered the domain of stage and theatre.

Constructed from marine-grade aluminium, and featuring countersunk mains outlets and internal wiring, the RAIL66 mounting system is suitable for indoor or outdoor applications. All RAIL66 mounting components as well as compatible WE-EF RAIL66 projectors and floodlights are IP66 rated.

MEGABAY AZURI LED Linear Luminaire

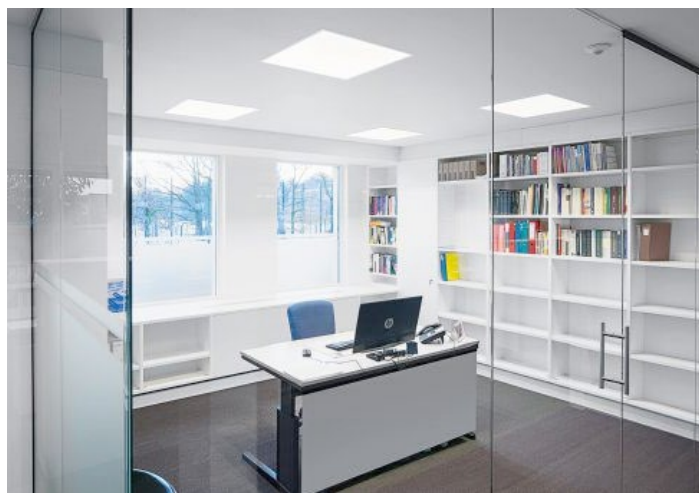

The Azuri LED luminaire supersedes the conventional fluorescent lighting with its impressive efficacy, prolonged operating life and superior colour rendering. It produces a continuous linear light without dark spots, a common effect desired in today's architecture. The luminaire is IP52 rated and available in standard and high lumen outputs.
