

## ERCO - Manningham Art Gallery at MC2

A tribute to influential ceramic artists marked the opening of an exciting new art gallery at the Manningham City Square (MC2) in Doncaster.

With 193 square metres of floor space, the Manningham Art Gallery features two exhibition areas with ceiling heights between 3000 and 6700mm, and 68 metres of linear wall hanging space.

B.I.G. worked closely with the design team (Haskell Architects and Murchie Consultant Engineers) and the Manningham City Council to select the best luminaire that would achieve the required levels of light for general and accent lighting within both exhibition spaces.

## WE-EF RFL 530 - Upgrade

Old generation

With the new simplified design of the RFL530, WE-EF is introducing another cost effective and energy efficient luminaire for street lighting. The **RFL530 II** maintains the top quality build and technical features of its old generation without the price tag. For more details contact the B.I.G. office.

New generation

ERCO Optec LED spotlights - featuring spherulit lens technology, DALI control gear and ERCO Light System DALI - were chosen to illuminate the gallery providing a low-maintenance and energy efficient lighting system.

A series of Optec spotlights with flood and wallwash light distribution create that even and soft ambient illumination, while those with very narrow light distribution provide the necessary accent lighting to emphasize the textures and colours of these unique art pieces without any discomfort glare.

For more information on current exhibitions and opening hours, visit the **Manningham City Council Website**
